

Holistic platform for 24/7 fast, transparent, and cost efficient pest control

Supported and Funded by

Innovate
UK

Ukrainian
Startup
Fund

Problems & Challenges:

-  **PESTS** are everywhere and their number is constantly increasing. Around **40%** of **global food** production is **lost** due to pests. Rodents contaminate/consume about **20%** (\approx **\$1 trillion**) of the **world's food** supply **each year**.
-  Approximately **90%** of **pest control services** still rely on **traditional equipment**, requiring frequent manual inspections even in the absence of pest activity.
-  **EMPLOYEE BURNOUT:** manually checking **MILLIONS** of traps is **repetitive and monotonous** work, significantly reducing employee motivation and efficiency.
-  **HIGH RISKS:** **delayed infestation detection** leads to **product damage**, health risks, customer complaints, and reputational losses.
-  **WASTE OF EFFORTS:** Over **70%** of time is spent on **manual checking** of empty traps instead of focusing on critical tasks like inspection and addressing infestation causes.
-  **WASTE OF TIME** for manually filled reports with possible mistakes & often containing inadequate data, resulting in a lack of transparency.

Proposed solution

Smart LoRa IoT live multi-catch mousetrap

- Instant notification of a capture
- Direction of mouse movement
- Quantity of mice inside
- One year of 24/7 battery life

Smart LoRa IoT rodent bait station

- Smart monitoring of bait consumption
- Quantity of bait consumed
- Time period of consumption

HUB Lora + WiFi/LTE

- Sends info to the PMS via internet
- Buffers messages from smart monitoring equipment in its internal memory

Pest Management System

- 70+% saving physical working time
- Automated reports, statistics, analytics
- Interactive map with advanced features
- Smart and regular equipment compatible

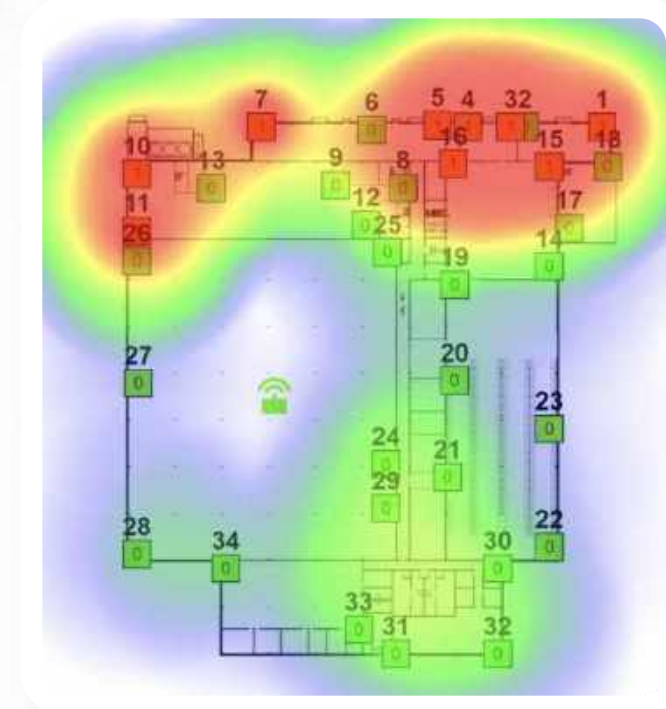

AI

- Distinguishes types of insects caught
- Counts number of insects of each species
- Smart assistant: AI co-pilot

Digital pest control technician

- 24/7 pest monitoring
- 70+% time savings
- job satisfaction enhancement

System Capabilities & Advantages

Real-time Monitoring

Immediate detection & notification

Wireless Connectivity

LoRa → Wi-Fi and 3/4G

Easy Installation

Set up in 10 minutes

Comprehensive analytics

Improved insights, efficiency, precision

Non-toxic Approach

Environmentally safe and globally compliant

Long Battery Life

1+ year monitoring on a single battery

Low Maintenance

Easy module swap

Minimal Bait usage

Cost-saving & reducing waste

MAX. CAUGHT

122 pcs.

AVG. CAUGHT

112 pcs.

MIN. CAUGHT

104 pcs.

MAX. CAUGHT TRAP

147 pcs.

AVG. CAUGHT TRAP

82 pcs.

MIN. CAUGHT TRAP

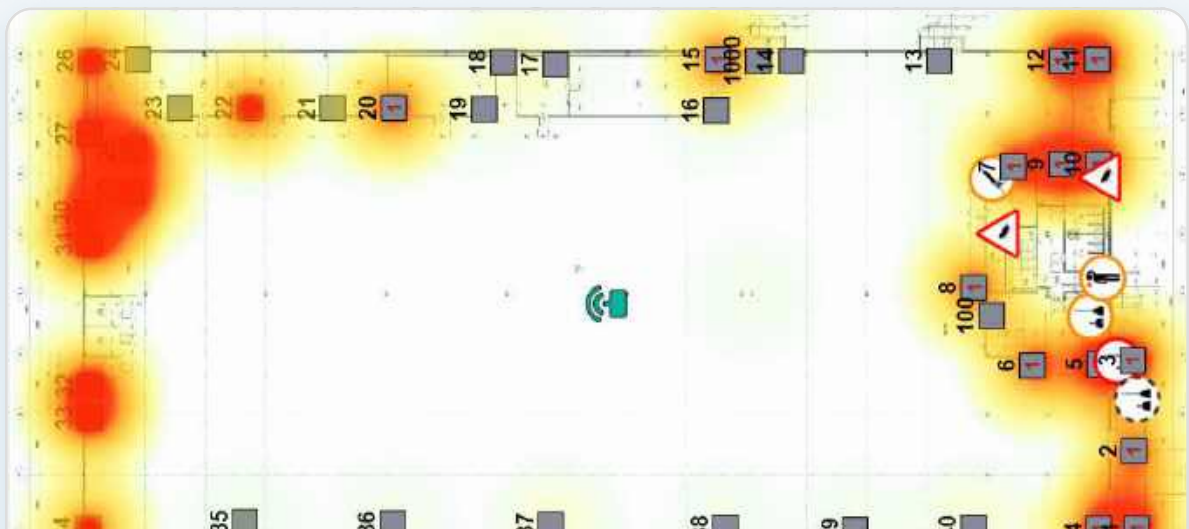

8 pcs.

Analysis of mice activity

Top periods of the greatest mice activity

Period	K-t
00:00 - 02:00	551 mice.
22:00 - 00:00	507 mice.
20:00 - 22:00	491 mice.
18:00 - 20:00	490 mice.
02:00 - 04:00	255 mice.
16:00 - 18:00	75 mice.
06:00 - 08:00	62 mice.
12:00 - 14:00	60 mice.
08:00 - 10:00	55 mice.
04:00 - 06:00	53 mice.
14:00 - 16:00	51 mice.
10:00 - 12:00	49 mice.

Smart IOT Multi-catch mouse trap

for mice and small rodents (used indoors)

Up to 15 mice

1 year of autonomous work

≤ 1 km

≤ 4 floors

Trojan HUB

How it works?

- The trap allows entry, prevents escape, and can catch up to 15 mice.
- Two sensors detect mouse activity
- Once triggered - sends alerts to the hub via LoRa.
- The hub forwards data to PMS via Wi-Fi or mobile.

What are the advantages?

- Saves time by eliminating the need for manual checks.
- Tracks trigger events precisely, helping identify the cause easily.
- Sends instant alerts to prevent decomposing rodents, ensuring safety and hygiene.
- Provides automated statistics, reports in PMS, and displays data on an interactive map.

Smart IOT Rodent bait station

for rats and other rodents (used in/outdoors)

1 year of autonomous work

How it works?

- Rodents can freely access the station.
- Non or Toxic bait is strung on a metal rod.
- A weight sensor monitors bait usage hourly.
- Data is sent to the hub via radio.
- The hub transmits updates to the PMS via Wi-Fi or 3/4G.

What are the advantages?

- No manual checks required.
- Uses non-toxic baits during the prevention stage, meeting EU regulations.
- Tracks bait consumption and timing with precision for better accuracy.
- Real-time site monitoring for proactive management.

Traditional Methods vs. Our Solution

	Traditional Methods	TROJAN SYSTEMS
Trap inspection time	2 minutes per trap, 33+ hours for 1000 traps	Automatic data transmission, real time inspection, 2-3 hours for 1000 traps
Documentation	Paper-based/manual input into systems, human error prone	Automated reporting in PMS, 100% accuracy
Activity response	No data on trigger times, delayed analysis	Instant notifications, quick issue detection
Professional visits need	Unnecessary visits, even with no activity	Visits only when necessary
Data visualization	Manual creation of statistical graphs	Interactive map, graphs, automated statistics for analysis
24/7 monitoring	Not available	Continuous monitoring with real-time data

Total cost savings

£100

traditional

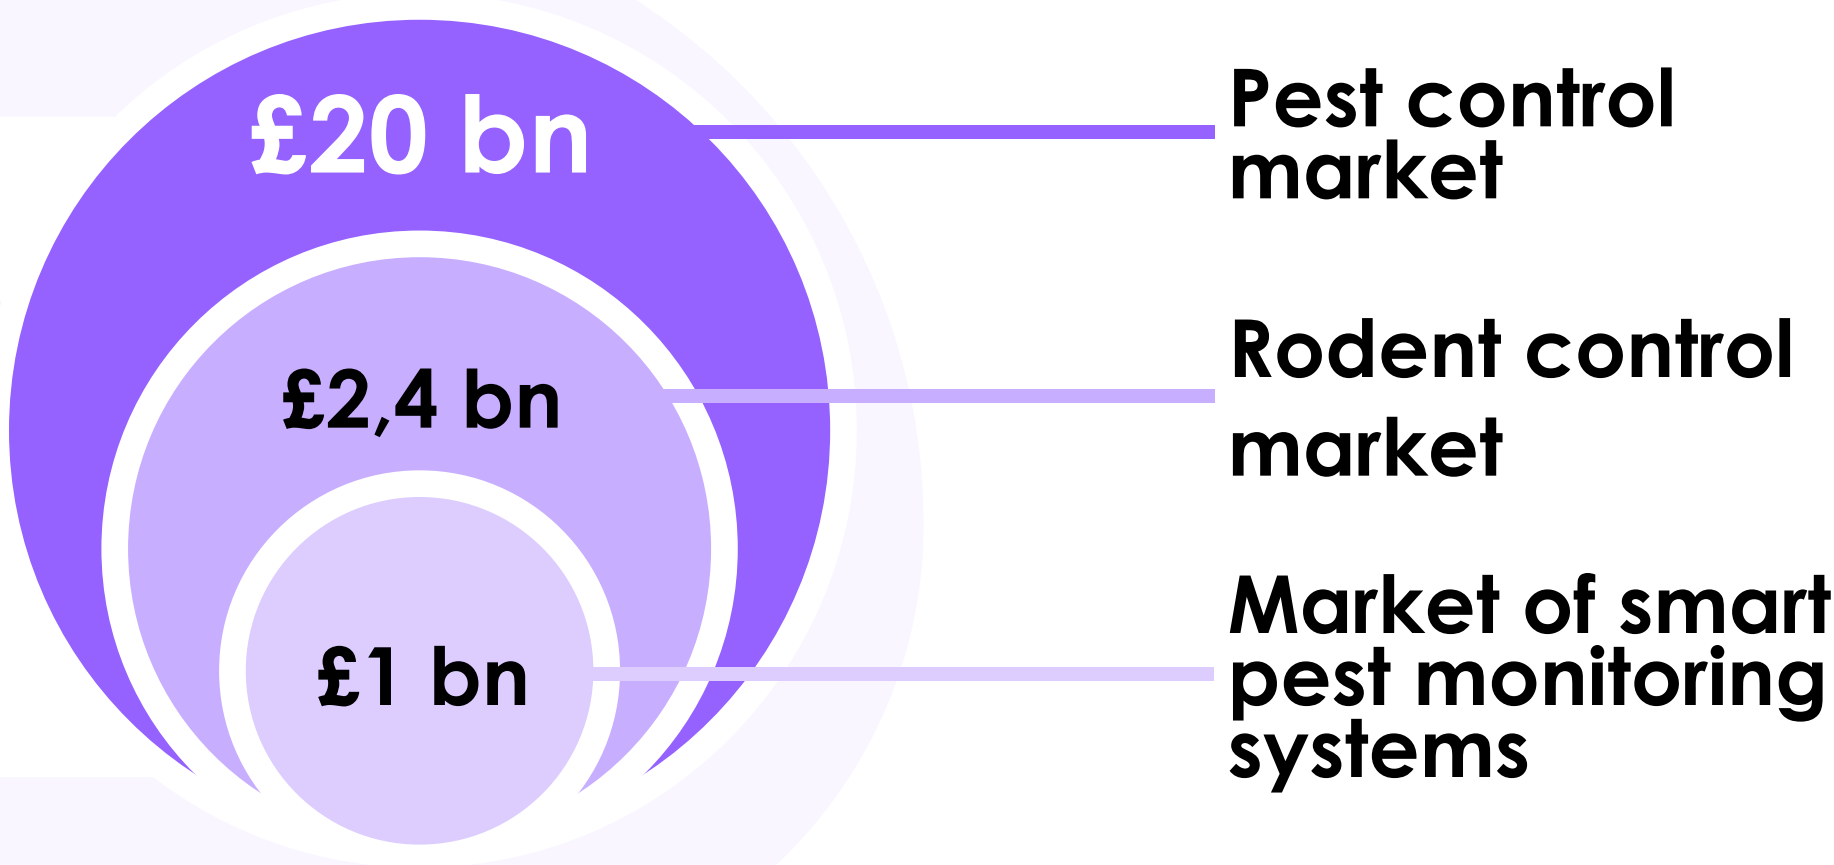

Trojan

75% savings

Market and competition

2025 year

Smart equipment market until 2034

	TROJAN	Traditional Methods	Bell traps	Victor	Traplinked	Trapsensor

+ Feature is fully supported | — Feature is not supported | Δ Feature has partial support or limitations

We started in 2023

 We invented **3 devices**, and launched web-based **pest management system**, **being tested** by professional companies from **Ukraine, Indonesia, Singapore, Brazil & the EU**

 We collected **over 185** warm **leads** all over the world, mostly from UK, EU, Finland, Georgia and Asia.

 We have signed **LOI** with **4** customers from **Malaysia, Georgia, Singapore** and **Saudi Arabia**, for total **11,500 units**

 In November 2024, our startup claimed **2nd** place among **700 participants** in the **Business Trampoline** competition, by **Visa** and **Rozetka.ua**.

 Amid tough competition, **we won** the **Seeds of Bravery – Rebuild Ukraine** grant with **USF's support** and set to receive **€25,000**.

 The **Innovate UK** program received **2,134** applications, with **only 44 projects** chosen for funding. Among the selected is **Trojan Systems**, which is set to receive **£350,000**.

Impact on the Industry & internal growth

Much More Precise Data

Service Quality & Efficiency Increase

Industry Growth

Small Business Growth

Lowering Risks For Food Safety & Human Health

Less Usage Of Biocides

Smart bait station for rodents

Smart mechanical traps for mice and rats

AI co-pilot

Smart glue trap for Asian market rodent control

Smart trap for crawling insects with AI photo analysis

A complete remote monitoring ecosystem - a full-cycle PMS

Smart module

Traction forecasted

	2025	2026	2027	2028
Customer	10 Operators & distributors	30 Operators & distributors	90 Operators & distributors	270+ Operators & distributors
Volume of units sold	3k	10k	35k	110k
Volume of units under service	3k	13k	48k	158k
Projected ARR(\$)	£36k	£156k	£576k	£1,9M
Annual revenue	£171k	£606k	£2,1M	£6,8M
